There has been tremendous progress in understanding cellular defects and underlying causes of cancer; genetics, epigenetics, cellular mechanisms to sustain growth, and the ability to disseminate. As a result, new and exciting targeted cancer therapies have been developed. These therapies have already made meaningful improvements in patient treatment and care. The aim of the Hope Funds for Cancer Research Scientific Convening is not only to highlight recent exciting advances, but to lay the groundwork for new advances in this field by bringing the best minds in cancer research to facilitate the next golden-age of discoveries and treatments.

Hope Funds for Cancer Research is a non-profit organization (509 (a)(1) charity under 501(c)(3) of the Internal Revenue Service's code) that was formed in 2006 by individuals with experience in oncology, intellectual property law, investment banking, philanthropy, sociology, and the arts to fund to the most interesting and promising academic research addressing the most difficult-to-treat cancers. Hope Funds for Cancer Research provides fellowships to postdoctoral scientists who propose to work on highly innovative research projects that challenge the traditional paradigms of understanding the causes, mechanisms,

progression, disease markers or risk factors of the most difficult-to-treat cancers, including (but not limited to) pancreatic, lung, liver, sarcomas, esophageal, brain, gastric, bone and ovarian cancers; and rare leukemias, lymphomas and MDS. Proceeds from all Hope Funds for Cancer Research activities, including this convening, support our research Fellows.
